Services

We work closely with our clients to deliver a tailored service.

Work is carried out in stages, from preliminary feasibility to completion of the building works and the fitting-out of the interiors. Clients may choose the full start-to-finish service or opt for part only, such as up to receipt of planning permission, in accordance with the requirements of the project.

We advise on the need to appoint other consultants, such as structural engineer, quantity surveyor, party wall surveyor or services engineer, and on how best to appoint a building contractor.

We offer an in house interior design service, for the design and specification of the internal fit-out, finishes and decorations. This is often carried out in conjunction with a specialist interior decorator.

On appropriate projects we will work from the beginning in close association with a contractor whose work we are familiar with to bring together with the contractor a team of other specialists to effect the quickest possible start of building work or to effect turnkey solutions or design and build options with the benefits of a one-stop-shop.

Computer modelling and visualisation play a significant part in aiding us in the design process, in analysing buildings and spaces and in communicating these to other consultants in the design team.

We use Vectorworks Architect (for CAD/BIM), as well as SketchUp for 3D modelling, in the early design stages and throughout the design development.

We bring to each job the personal commitment of the partner-in-charge as well as the strength of the team as a whole.
