

Haines Phillips Architects first YouTube channel video

This fly through animation shows our proposed new side and rear extensions to a residential house in Crouch End, London N8.

The proposal is to partially infill the gap at the side of their property, at ground and lower ground floor levels, and to add a small rear extension. The remainder of the house would be un-altered.

The proposed infill extension at ground floor level is set back from the main frontage of the existing houses and takes the form of a glass box.

A further side extension at lower ground floor level is proposed to infill the small irregular gap between the existing house and the boundary with the neighbouring property.
